Rotation

The on-call rota changes every Monday at 10:00. Each shift lasts 7 days, and each engineer takes at most one shift in every 4 weeks. The primary and the secondary engineer are listed in the rota channel. Swaps must be agreed in writing before the shift begins.

Paging rules

A critical page must be acknowledged within 5 minutes. A high priority page must be acknowledged within 15 minutes. If the primary engineer does not respond in time, the page goes to the secondary engineer, then to the engineering manager. Silent pages are never used for production outages.

Handover

At the end of a shift the engineer writes a handover note listing open incidents, temporary fixes and follow-up tasks. The note is posted in the rota channel by 10:00 on the Monday. The handover reference for this document is CANARY-ENG-88d92e42.
